

# Closing Points

- Understanding networks is an **iterative process**
  - **Analysis and visualisation** goes hand in hand
  - A network **visualisation is a step** - not an end goal
  - The tools we use **must** support that
- Information **derived from network** are crucial in visualisation
  - Easy **discoverability** and use are key
- Alternatives to hairballs must be **first class citizens**

A network diagram with a light blue background. It features a complex web of thin blue lines connecting numerous black circular nodes. Four prominent circular icons are placed within the network: Spider-Man's mask (red with white eyes) on the left, Captain America's shield (blue with red and white concentric circles and a white star) at the top center, Iron Man's helmet (gold and red) at the bottom right, and a grey circular icon with a black and white network cable connector at the top right. A semi-transparent blue rectangular box is centered in the middle of the image.
